Parking Study

It is our understanding that our parking needs may differ from that of the city code. The following information is meant to show how New Perspective views its parking needs as it relates to its operations. The below calculations were given to the architect when we began our site planning process.

The building program is proposed to include residents who are Independent, who might need assistance and those who may need assisted living and have some form of dementia. 53 of the units are anticipated to be Independent Living and 60 of the units would be Assisted Living. The balance would be memory care.

The current plans indicate 66 surface parking stalls and 29 enclosed parking stalls for a total of 95. New Perspective Senior Living has consistently applied the below formulas for its parking needs, and it has proved successful in their last 6 communities.

Resident Parking

- Independent Living typically requires .85 stalls per unit (.85 Stalls / Unit * 53 Units = 45 Parks)
- Assisted Living typically requires - .25 stalls per unit (.25 Stalls / Unit * 60 Units = 15 Parks)
- Memory Care requires no parking for residents (Zero Parks Required)

Total Resident Parks Required: 60 Parks

Staff Parking

We calculate our staff parking by taking our busiest shift, which will have approximately 26 employees, and 50% of our next shift 16 for staff transitions. (26+8=34 Staff Parks)

Total Staff Parks: 34 Parks

Visitor Parking

We have typically allocated 1 stall per 10 units in our buildings. (140 Units / 10 Units Per stall = 14)

Parking Summary:

	NPSL Program Requirement	Proposed Per Plan	Delta
Resident	60		
Staff	34		
Visitor	14		
Total Parks	108	95	-13

The chart below compares the parking at similar New Perspective properties.
